

Environmentally-friendly Pressure Sensitive Materials from NASTar Inc. that can be returned to the Paper Recycling Stream

NASTar Inc offers a **Compostable/Biodegradable Adhesive** degradable to innocuous materials under conditions commonly used in solid waste composting systems. **P4760 Adhesive** has been formulated primarily as a permanent adhesive based on components reported to meet the requirements of DIN CERTCO and BPI for biodegradability and compostability.

NASTar Inc. offers **Environmentally benign RCAs (Recyclable Adhesives)**, meaning the paper adhesive label, when affixed to paper, can be processed through the paper recycling stream. This allows the product to be pulped without “stickies.” An RCA breaks down into large particles that can be trapped in the screens and removed as solid waste to be landfilled with other waste or burned for energy. Our **P7700 adhesive**, specified by Section 702 of Executive Order 13148, was awarded approval as an environmentally benign PSA.

Our **Temporary Adhesive** product line (**T1055** and **T2**), tested against TAPPI UM213 is **repulpable**. It is designed to dissolve in the de-inking process; the waste water is carried for processing and the pulp fibers are carried through the paper recycling.

Linerless Constructions are also available for even more environmentally-friendly product alternative with **no liner waste**.

Enviro 100% Post Consumer Waste Green Seal®* and FSC Certified** face sheet is now available with all of the above structures.

* Green Seal is a Registered Trademark of Green Seal Inc. ** FSC SW-COC-1724

As with all recycled products, the individual paper mills must make the final determination of repulpability or recyclability on their specific standards.
